White Texas Star Hibiscus

Hibiscus coccineus alba

Texas Star Hibiscus is known for its tall, elegant look with palmately divided foliage and its large single 6" – 8" blooms. Now there's an absolutely pure white Texas Star.

The same unique and attractive foliage, and the same elegant 5' – 6' height, topped with single 8" pure white flowers. Texas Star is tough, hardy, and adapts well to wet, heavy ground. This hibiscus performs best in full sun & makes a striking accent or background perennial. Cut back the old stems after a hard freeze.
